Application for Lead Process / System and Instrumentation Design Engineer (m/f/d) – Ref. R169394

Dear Hiring Team,

I am applying for the Lead Process / System and Instrumentation Design Engineer position in Warsaw, and I am doing it differently from most candidates: I am not offering you a person who waits to be told what to design. I run my own engineering service practice, and the services I sell to clients are the ones this role needs from day one: system definition, P&ID and PFD packages, equipment and instrumentation selection, thermal and mechanical calculations, simulation, and integration of the design into the plant that is already running.

The practice covers six service lines, all exercised on real projects: process and system engineering; thermal and mechanical design of pressure equipment under ASME U/R/S; flow assurance and simulation in HYSYS, PIPESIM, OLGA, HTRI and ANSYS; 3D and documentation work in AutoCAD Plant 3D and Inventor; project and interface management, including API and ISO 9001/14001 audits with zero findings; and the digital side, where I build Python tooling and documentation pipelines that take manual work out of engineering.

I will be equally direct about the gap. I have not led upgrade packages for gas turbines and compressors, and I have not chaired HAZOP, SIL or LOPA reviews with a customer and a notified body in that role. What I bring instead is a record of entering a scope, owning the dossiers and closing them: at Weatherford I co-managed more than 35 well testing projects, released over 50 P&ID, PFD and 3D mechanical packages, supported site integration and reverse-engineered as-built configurations. At Intercol I designed separators and shell & tube exchangers and standardised the documentation across projects. Lube oil, seal gas and fuel gas systems are adjacent to what I have engineered, not foreign to it.

My service catalogue is on my website (https://raulmina1.github.io/ra-blog/), and the projects behind it are on the second page of my portfolio, which lists the equipment and systems I designed and calculated for Intercol, Weatherford and Neocarbon. I am based in Berlin and available for the hybrid on-site schedule in Warsaw, including site surveys and short-term assignments.

I would like to discuss whether you want this role filled by an employee, or by a service partner who delivers the packages end to end. Both are possible from my side.

Sincerely,

Raul Esteban Mina Riascos
